SOC2 Compliance Report

Generated on: May 03, 2025 14:15

Scan ID:

SOC-20250503-e2ab2e

Executive Summary

This report presents the findings of a SOC2 compliance analysis conducted on <https://github.com/vishaal314/terrascan> (branch: **master**) on **2025-05-03 14:15:55**. The scan identified a total of **161** compliance issues with **129** high-risk items. The overall compliance score is **1/100**. **Technologies Detected:** docker, clouformation, ansible, terraform, kubernetes, javascript, pulumi. Each finding in this report is mapped to specific SOC2 Trust Services Criteria (TSC) to help you understand how it impacts your compliance posture. The TSC categories include: • CC: Common Criteria (Security) • A: Availability • PI: Processing Integrity • C: Confidentiality • P: Privacy

Scan Type	soc2
Repository URL	https://github.com/vishaal314/terrascan
Branch	master
Date & Time	2025-05-03 14:15:55
Technologies	docker, clouformation, ansible, terraform, kubernetes, javascript, pulumi
Compliance Score	1/100
IaC Files Found	1662
Total Files Scanned	2202
High Risk Issues	129
Medium Risk Issues	32
Low Risk Issues	0
Security Issues	146
Availability Issues	10
Confidentiality Issues	5

Risk Assessment

GDPR Compliance Protection

Your organization is well-protected against potential GDPR fines

Potential fines up to €20 million or 4% of global revenue

No PII items were found in this scan. Continue monitoring to maintain GDPR compliance.

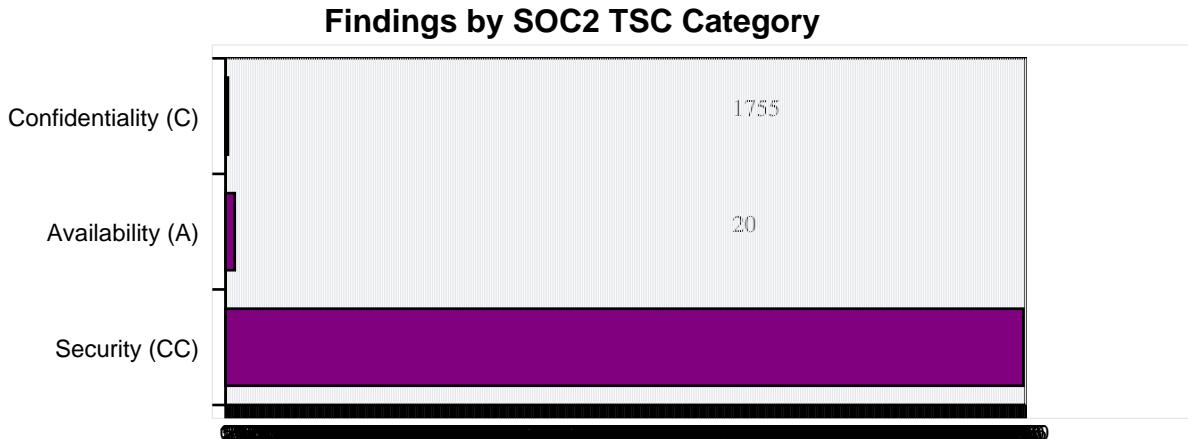

Detailed Findings

SOC2 Compliance Summary

This SOC2 compliance scan resulted in a score of 1/100, which is considered **Critical**. The findings are categorized below based on Trust Services Criteria (TSC) categories to help with prioritization and remediation.

Repository	https://github.com/vishaal314/terrascan
Branch	master
Scan Date	2025-05-03 14:15:55
Total Findings	161
High Risk Findings	129
Medium Risk Findings	32
Low Risk Findings	0

Findings by SOC2 TSC Category

SOC2 Detailed Findings

File	Line	Description	Risk	Category	SOC2 TSC
deploy/helm/template.go	32	Container running as non-root user	MEDIUM	Security	CC1.1, CC1.2, CC1.3, CC1.4
pkg/cli/testdata/run-test/main.go	41	AWS provider without version constraint	MEDIUM	Security	CC1.1, CC1.2, CC1.3, CC1.4
pkg/cli/testdata/run-test/main.go	49	Container allowed to escalate privileges	HIGH	Security	CC1.1, CC1.2, CC1.3, CC1.4
pkg/cli/testdata/run-test/main.go	53	Container allowed to escalate privileges	HIGH	Security	CC1.1, CC1.2, CC1.3, CC1.4
pkg/cli/testdata/run-test/main.go	114	Security group with unrestricted ingress	HIGH	Security	CC6.6, CC6.7
pkg/cli/testdata/run-test/main.go	221	Security group with unrestricted ingress	HIGH	Security	CC6.6, CC6.7
pkg/downloader/module.go	57	Hard-coded credentials or secrets	HIGH	Security	CC6.1, CC6.6, CC6.7
pkg/http-server/file-server.go	107	Hard-coded credentials or secrets	HIGH	Security	CC6.1, CC6.6, CC6.7
pkg/http-server/file-server.go	295	Hard-coded credentials or secrets	HIGH	Security	CC6.1, CC6.6, CC6.7

SOC2 Recommendations

The following recommendations are based on the scan findings. Implementing these recommendations will help improve your SOC2 compliance posture and reduce risks.

1. Recommendation 1 (Priority: Medium)

SOC2 Security - Disable privilege escalation for containers

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/cli/testdata/run-test/test_pod.yaml:19, pkg/cli/testdata/run-test/test_pod.yaml:43, pkg/iac-providers/kubernetes/v1/testdata/file-test-data/test_bad_kind.yml:15...
- SOC2 TSC Criteria: CC1.1, CC1.2, CC1.3, CC1.4, CC2.1, CC2.2, CC2.3, CC3.1, CC3.2, CC3.3, CC3.4, CC4.1, CC4.2, CC5.1, CC5.2, CC5.3, CC6.1, CC6.2, CC6.3, CC6.4, CC6.5, CC6.6, CC6.7, CC6.8, CC7.1, CC7.2, CC7.3, CC7.4, CC7.5, CC8.1, CC9.1, CC9.2

2. Recommendation 2 (Priority: Medium)

SOC2 Security - Restrict ingress traffic to known IP ranges or specific sources

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/cli/testdata/run-test/web.tf:14, pkg/cli/testdata/run-test/web.tf:23, pkg/http-server/testdata/testconfig.tf:50...
- SOC2 TSC Criteria: CC6.6, CC6.7

3. Recommendation 3 (Priority: Medium)

SOC2 Security - Store sensitive information in environment variables or a secure vault

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/downloader/module-download_test.go:571, pkg/http-server/file-scan.go:107, pkg/http-server/file-scan_test.go:395...

- SOC2 TSC Criteria: CC6.1, CC6.6, CC6.7

4. Recommendation 4 (Priority: Medium)

SOC2 Security - Follow the principle of least privilege by limiting permissions

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/iac-providers/cft/v1/testdata/templates/s3/deploy.json:24, pkg/iac-providers/cft/v1/testdata/templates/s3/deploy.template:24, pkg/iac-providers/terraform/v12/testdata/tfjson/moduleconfigs.json:591...
- SOC2 TSC Criteria: CC6.1, CC6.3

5. Recommendation 5 (Priority: Medium)

SOC2 Confidentiality - Restrict S3 bucket access to only required principals

Implementation Steps:

- Enable encryption for data at rest and in transit
- Review and update access controls
- Focus on files: pkg/iac-providers/cft/v1/testdata/templates/s3/deploy.json:7, pkg/iac-providers/cft/v1/testdata/templates/s3/deploy.template:7, pkg/utils/skip_rules_test.go:123
- SOC2 TSC Criteria: C1.1

6. Recommendation 6 (Priority: Medium)

SOC2 Security - Avoid using hostPath as it allows access to host filesystem

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/iac-providers/kubernetes/v1/testdata/k8s_templates.go:164, pkg/iac-providers/kubernetes/v1/testdata/k8s_templates.go:167
- SOC2 TSC Criteria: CC6.1, CC6.8

7. Recommendation 7 (Priority: Medium)

SOC2 Security - Avoid using eval() as it can lead to code injection vulnerabilities

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/iac-providers/terraform/commons/cty-converters_test.go:287
- SOC2 TSC Criteria: CC5.1, CC6.8, CC7.2

8. Recommendation 8 (Priority: Medium)

SOC2 Security - Avoid using exec() as it can lead to command injection vulnerabilities

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/k8s/dblogs/webhook-scan-logger.go:72, pkg/k8s/dblogs/webhook-scan-logger.go:206
- SOC2 TSC Criteria: CC6.1, CC6.8, CC7.2

9. Recommendation 9 (Priority: Medium)

SOC2 Security - Use secrets manager instead of hard-coded passwords

Implementation Steps:

- Review and remove hard-coded credentials and secrets
- Implement proper secret management
- Update security configurations to follow least privilege principle
- Focus on files: pkg/vulnerability/acr.go:37, pkg/vulnerability/acr.go:208, pkg/vulnerability/gcr.go:251...
- SOC2 TSC Criteria: CC6.1, CC6.7

10. Recommendation 10 (Priority: Medium)

SOC2 Confidentiality - Enable encryption for data protection

Implementation Steps:

- Enable encryption for data at rest and in transit
- Review and update access controls
- Focus on files: test/e2e/test_data/iac/aws/aws_db_instanceViolation/main.tf:89, test/e2e/test_data/iac/resource_skipping/terraform/main.tf:92
- SOC2 TSC Criteria: C1.1

11. Recommendation 11 (Priority: Medium)

SOC2 Security - Run containers as non-root users

Implementation Steps:

- Update security configurations to follow best practices
- Implement proper access controls
- Focus on files: deploy/helm/templates/deployments.yaml:32
- SOC2 TSC Criteria: CC1.1, CC1.2, CC1.3, CC1.4, CC2.1, CC2.2, CC2.3, CC3.1, CC3.2, CC3.3, CC3.4, CC4.1, CC4.2, CC5.1, CC5.2, CC5.3, CC6.1, CC6.2, CC6.3, CC6.4, CC6.5, CC6.6, CC6.7, CC6.8, CC7.1, CC7.2, CC7.3, CC7.4, CC7.5, CC8.1, CC9.1, CC9.2

12. Recommendation 12 (Priority: Medium)

SOC2 Security - Specify provider version constraints for better stability and security

Implementation Steps:

- Update security configurations to follow best practices
- Implement proper access controls
- Focus on files: pkg/cli/testdata/run-test/main.tf:2, pkg/http-server/testdata/testconfig.tf:1, pkg/iac-providers/terraform/v12/testdata深深-modules/template.tf:5...
- SOC2 TSC Criteria: CC1.1, CC1.2, CC1.3, CC1.4, CC2.1, CC2.2, CC2.3, CC3.1, CC3.2, CC3.3, CC3.4, CC4.1, CC4.2, CC5.1, CC5.2, CC5.3, CC6.1, CC6.2, CC6.3, CC6.4, CC6.5, CC6.6, CC6.7, CC6.8, CC7.1, CC7.2, CC7.3, CC7.4, CC7.5, CC8.1, CC9.1, CC9.2

13. Recommendation 13 (Priority: Medium)

SOC2 Availability - Enable backup for data protection and availability

Implementation Steps:

- Enable backup and disaster recovery features
- Implement proper redundancy and failover mechanisms
- Focus on files: test/e2e/test_data/iac/aws/aws_db_instanceViolation/main.tf:32, test/e2e/test_data/iac/aws/aws_db_instanceViolation/main.tf:46, test/e2e/test_data/iac/aws/aws_db_instanceViolation/main.tf:106...
- SOC2 TSC Criteria: A1.2, A1.3

SOC2 Trust Services Criteria (TSC) Explanation

SOC2 Trust Services Criteria refer to the specific control points used to assess compliance:
• CC: Common Criteria (security)
• A: Availability
• PI: Processing Integrity
• C: Confidentiality
• P: Privacy
Each finding in this report references specific TSC criteria to help understand how it impacts compliance posture.

Recommendations & Next Steps

- Implement a formal process for assigning and managing access rights in accordance with the principle of least privilege.
- Develop a comprehensive risk management process that includes automated scanning strategies for Infrastructure-as-Code.
- Conduct periodic reviews of security configurations and apply best practices across all SOC2 Trust Services Criteria.
- Document and verify all control measures relevant to the TSC criteria noted in the findings.
- Implement automated compliance checks in CI/CD pipelines to detect deviations early in the development cycle.

High-Risk Item Recommendations

- Prioritize immediate remediation of high-risk findings related to CC security-critical components.
- Implement strict access controls for sensitive infrastructure components applying the principle of least privilege.
- Conduct detailed risk assessment for all Common Criteria-related findings.
- Document and test incident response processes for all high-risk vulnerabilities.
- Install an automated validation process that checks IaC changes before they are applied to production environments.
